CONTINUATION SHEET

Claim 1 defines the term 'partition key' to be "a partition key associated with a particular partition of a multi-partitioned network having a plurality of partitions, and is used such that the node receiving the packet can determine which of the partitions of the multi-partitioned network can access the node receiving the packet", and this key is received as a part of the received packet at such node.

Applicants would like clarification as to what is being interpreted (in the references being cited in rejecting Claim 1) to be this claimed 'partition key'.
